

F-9-R-12 Southwest Montana Fishery Study.

Job I. Inventory of the Waters in the Project Area.

Beaverhead River Temperature Study.

The objective is to determine the effects of Clark Canyon Reservoir on the water temperatures of the Beaverhead River. Thermographs (temperature recorders) <sup>were</sup> installed at various locations on the Beaverhead River drainage last year. Water temperatures will be compared before and after completion of the dam.

This project will be continued for about three years.
